

Renewable Energy & Climate Alarmism (RECA)

Lies, Myths and Legends

A series of graphs, images and cartoons dedicated to showing the uselessness of Renewable Energy and the economic disruption that it creates, and the pseudoscience associated with Climate Alarmism.

Believe it: There is NO CLIMATE EMERGENCY

Believe it: 'Zero Emissions' = ECONOMIC SUICIDE

Meet the Dimmer Twins

Meet the Dimmer Twins— Mike Cooley at left, and Patterson Hood at right. They are the Drive By Truckers, a band dedicated to hard-driving Southern Rock in the USA, both playing acoustic guitars. Their name is said to be a nod to Mick Jagger and Keith Richards of the Rolling Stones, who together were also known as the 'GLIMMER TWINS'. What possible connection do they have to the Australian Energy Market Operator?

Perhaps it is a word association thing
“DIM” = ‘Not very bright’

Renewable Energy & Climate Alarmism Lies, Myths and Legends

Here is a duo from the AEMO

Kerry Schott

Audrey Zibelman

Between them, from 2017 these two high-profile operators of the Australian Energy Market Operator took the cheapest and most efficient energy grid in the world and transformed it into an expensive mish-mash of wind and solar power that increases prices and unreliability and forces base load coal power out of the market.

Renewable Energy & Climate Alarmism Lies, Myths and Legends

Let's meet a real DIMMER

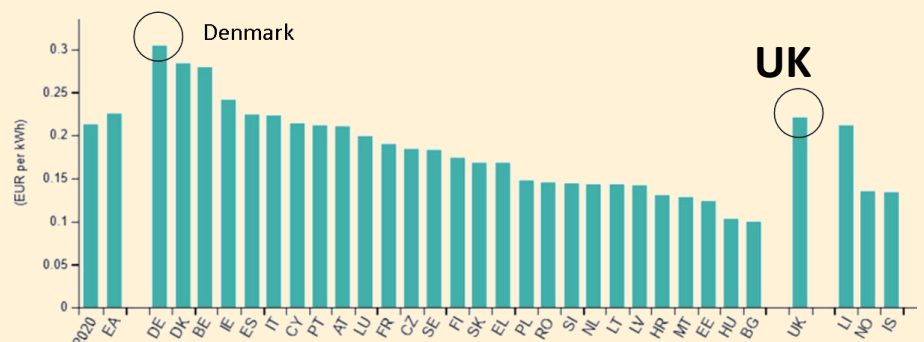

This is Damien Hardwick, long-standing coach of the Australian Football League's RICHMOND club in Melbourne, which is enjoying a run of premiership wins in the AFL for years 2017, 2019 and 2020. In the spirit of colloquialism in Australia such as the name "Gary" being changed to "Gazza", the first name 'Damien' simply gets changed to 'Dimmer', and he is very bright.

Now meet Daniel Westerman, executive of National Grid in the UK. He has been appointed to replace, in May 2021, Audrey Zibelman, who left AEMO to join 'X', a part of Google's parent company Alphabet. What will he bring to the AEMO??

Electricity prices (including taxes) for household consumers, first half 2020

"Just now in the UK 25 Feb 21 we have very little wind, so currently the wind power being generated is 0.87 GW with a demand of 36.57 GW on a cold Saturday afternoon." Comment on Jo Nova blog

Renewable Energy & Climate Alarmism Lies, Myths and Legends

Renewable energy has beneficial application in those areas off the grid or in the outback, pumping water to stock and power to caravans or cabins. Elsewhere it is just another heavily subsidised woke impost on taxpayers.

One solar panel at an off-grid property charges a high-quality Pb– acid battery which in turn powers the weekender caravan with small fridge, power and lighting. This is GOOD renewable energy which has cost the taxpayer NOTHING
