

CENTRAL WEST GEOLOGY TECHNICAL SESSION

WEDNESDAY 7th DECEMBER 2022

Upstairs function room, Lord Anson Hotel
224 Anson Street, Orange

6pm for 6:30pm

Join us on Wednesday 7th December for a technical presentation by:

Adam McKinnon

The Myall Project – towards the next major Cu-Au discovery in NSW

Pursuing encouraging copper results from historic diamond drilling at Myall, in 2021 Magmatic Resources drilled a single diamond hole at the Kingswood Prospect, returning an interval 382 metres at 0.20% Cu. Following a subsequent review of the potential of the broader region, diamond drilling at the nearby Corvette Prospect commenced in July 2022, with the first completed hole returning a massive, mineralised interval of 722.5 metres at 0.25% Cu, 0.05g/t Au & 14ppm Mo from immediately below the cover sequence. A second hole drilled immediately to the north returned another very large interval of 413.4 metres at 0.26% Cu, 0.08g/t Au & 21ppm Mo from the base of cover. Most recently, partial results from the third completed hole at Corvette have delivered the best interval to date, comprising 154.6 metres at 0.47% Cu, 0.10g/t Au & 26ppm from the base of cover - with assays for the majority of this hole still pending. Exploration is ongoing at Myall, with Magmatic recently committing to a program of at least 8,000 metres of diamond drilling to unlock the potential of Corvette and surrounding prospects.

Adam McKinnon is a mining and exploration geologist with 16 years industry and academic experience and is currently the Managing Director of Magmatic Resources Limited. Adam holds a PhD in mineralogy and geochemistry from Western Sydney University, with particular expertise on the gold and base metal deposits of central western New South Wales

Drinks and nibbles will be provided before the talk

Optional PYO dinner and drinks after the talk at the Lord Anson Hotel

Supported by:

For more info on the event, contact CWEDG cwedg@outlook.com

Talk = 1 CPD hour
