

CENTRAL WEST GEOLOGY TECHNICAL SESSION and END OF YEAR DINNER AND DRINKS THURSDAY 30th NOVEMBER 2023

Upstairs function room, Lord Anson Hotel,
224 Anson Street, Orange. 6:00pm for 6.30pm

Jonathon Hoye

Senior Geologist - Orebody Knowledge, CMOC-Northparkes Mines

Exploration in the Macquarie Arc: What are we missing, and why is it important?

The Macquarie Arc is widely recognised as the most permissive porphyry terrane in Australia, with world-class deposit clusters such as Cadia and Northparkes. Notwithstanding discoveries at Boda (Alkane Resources), defined resources at Myall/Corvette (Magmatic Resources), and recent exploration successes elsewhere, the potential of the Macquarie Arc has yet to be fully realised. Is this a function of the prospectivity of the ground we are exploring? Or the way we are exploring it?

Join us for the meeting, drinks, nibbles and dinner.
